

HYDRAZZO

Premium Polished Pool Finish

HYDRAZZO SLIP COEFFICIENT

Hydrazzo is formulated not only for the residential waterscape market but for commercial swimming pool applications that comply with Federal guidelines and the OSHA Coefficient of Friction of no less than 0.60.

The polished Hydrazzo surface has been credited with having one of the highest customer satisfaction ratings in the waterscape industry.

With over 30 years of experience, the formulators of Hydrazzo developed a mix design that utilizes their years of experience with modified cement and industrially graded marble, quartz, and granite. When professionally installed, the final polishing phase adds another dimension of smoothness, creating a hard, dense surface.

Hydrazzo has been tested by QC Metallurgical Testing and Consulting Services, Inc., Miami, Florida, and exceeds the OSHA minimum standard of 0.60 with an average C.F. 0.68 dry and average C.F. 0.69 wet. For further information or a copy of the test report email your request to info@aquavations.com or call 1-800-429-4701.

Algae will cause anti-slip surfaces to become dangerous. Please make sure that reasonable sanitizer and water chemistry parameters are maintained for safety as-well-as preservation. If there is any question about safety, because of a degree of incline or use, a light acid and water solution (10%) can be applied with a sponge without every changing the texture.
